

Flask Registration Website Project

Student Project Report

1. Introduction

This project is a Registration Form Website developed using Python Flask framework. It allows users to fill their personal details through a web interface.

2. Technologies Used

- Python
- Flask Framework
- HTML
- CSS
- VS Code

3. Project Description

The website contains a registration form with fields like name, father name, mother name, phone, email and gender. After submission, data is processed using Flask backend.

4. How It Works

Flask runs a local server. The form is accessed via browser using a URL. Submitted data is handled using POST method.

5. Conclusion

This project helps in understanding web development using Flask and demonstrates how Python can be used to create websites.
